Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

1: Non-repetitive current pulse per Figure 5 and derate above $T_A=25^\circ\text{C}$ per Figure 6;

2: FR-5 = 1.0 x 0.75 x 0.62 in;

3: Alumina = 0.4 x 0.3 x 0.024 in, 99.5% alumina

* Other voltages may be available upon request.

4: V_{BR} measured at pulse test current I_T at an ambient temperature of 25°C

5: Z_{ZT} and Z_{ZK} are measured by dividing the AC voltage drop across the device by the AC current applied. The specified limits are for $I_Z(\text{AC})=0.1 I_Z(\text{DC})$, with the AC frequency = 1.0kHz.

6: Surge current waveform per Figure 5 and derate Figure 6
